

# The Boardski Bracket Kit installation Instructions.

## Page 3

### Step #14

### Step #14

Remove snowboard and place skis and poles in rack. The tails of the skis go on the running boards if possible. If using touring bindings or there are clearance issues the tips can go on the running boards also. Stick stomp pad provided on the side of tunnel if skis are rubbing on snowmobile.

Strap with ratchet buckle go over both skis and poles. Insert the ladder strap into the ratchet buckle and ratchet down tight. Repeat on other strap. Adjust strap length using holes in straps. When proper strap length is acquired remove skis and poles and try again with snowboard. There is a happy medium you will find that will work with both skis and snowboards. After you find that happy medium use ratchet driver with 7/16ths socket and 7/16th open end wrench and tighten bolts .

### Step #15

**Check bolts regularly and make sure they are tight.**
